

Maestro

The Maestro Conical Burr Grinder. This one of the most eye pleasing grinders on the market, but the beauty isn't skin deep. Inside is the heart of a great grinder that can grind coffee beans for any style of coffee, whether it is an espresso machine, drip coffee maker, or press pot. The Maestro was originally introduced in 2001 with lots of innovative features. In March 2007, the Maestro was upgraded to include increased range of adjustment, an innovative calibration system and other improvements.

German made conical burrs. The Maestro uses the same 40 mm conical burrs it has always used. Conical burr grinders are exceptional at producing consistent grinds from very fine to coarse.

Grind Coffee for Any Brewing Method. There are many coffee grinders on the market. However, few have the ability to grind fine enough for a professional espresso machine and coarse enough for a press pot. The upgraded Maestro has 40 steps of adjustment, up from 18 steps. Choose the perfect setting by turning the bean hopper to the desired position.

Innovative calibration. Commercial grinders have a calibration system to ensure that the grinder will grind fine enough for espresso and has the range to grind coarse enough for a press pot. Now this feature is available in a grinder designed for home use. The grinders are calibrated when they are manufactured to ensure an accurate range of grind. If necessary the grinders can be user calibrated.

Special Gear Reduction. The Maestro uses a combination of gear and electronic speed reducers to slow the spinning of the burr to 450 RPM. This slow speed reduces heat, noise, and static generation in the grinder. It also ensures that the beans feed smoothly into the burrs.

On/Off Switch. The Maestro is equipped with a uniquely designed On/Off switch. You may rotate the switch clockwise or counter clockwise from any position without damaging it. Grinds directly into the portafilter or integral grounds bin.

Service & Support. One year warranty.

Product Specifications:

Bean Hopper: 250gm

Grounds Bin: 100gm
